

Onshore Installation

Site:
Bearkat I, Texas, USA

Client:
KranWind LLC

Timeframe:
2017

Scope of work

Global Wind Service provided a complete project set-up including skilled personnel for:

- unloading
- pre-assembly
- installation
- mechanical & electrical completion
- tooling
- HSEQ

Complete set-up

Large scale project

Over a period of 18 weeks Global Wind Service worked on the Bearkat I project.

During that time more than 100 technicians have worked at site and a total of 14 cranes were used.

//

Bearkat I Wind Farm represented KranWind's first WTG installation project, and KranWind is very happy to have engaged GWS as its strategic partner and subcontractor on the project. Working together as a strong team, KranWind and GWS safely delivered a high quality project, and overcame multiple extreme weather and logistical challenges to complete the WTG installation work on schedule. KranWind looks forward to working with and alongside GWS on future projects."

Chris Hills, Managing Director at KranWind LLC
